

## Efficient planning with BIM.

## Now easier than ever with products from Belimo.

Building Information Modeling (BIM) is the modern method of planning, constructing and managing buildings. With its world-leading actuator, valve and sensor solutions, Belimo is helping to make BIM even more efficient for every field of application. You and your customers benefit from these advantages:

- Only one Belimo database for the selection of 3D data models
- Planning, deadline and cost security
- Transparency in all Belimo product data
- Up-to-date, improved quality information for all project participants is available immediately

**BELIMO**<sup>®</sup>

# Efficient planning with BIM and Belimo. Simply and quickly from one database.

## 3D data models with technical information from Autodesk Revit via the Belimo plug-in.

This plug-in allows you to select Belimo actuators, valves and sensors from one database and add them to the Building Information Modeling project with their technical data via drag & drop. All BIM users thus have access to all data in a structured and classified form in the Revit MEP format.

## 3D data models with technical information from the Belimo VDI3805 Selektor.

Belimo's VDI Selektor now makes it possible to no longer just select individual products, but rather combinations of valves and actuators as well. Data including any technically relevant information can be conveniently added to a project.

## How do you proceed?

- Use the BIM plug-in from Belimo in conjunction with Autodesk Revit.
- Work with Belimo's VDI Selektor and benefit from simplified use.

The BIM plug-in and the VDI Selektor are available for free download at [www.belimo.eu](http://www.belimo.eu).

Planning with digital building models from BIM guarantees a significant increase in productivity and, at the same time, a reduction in planning errors. Use BIM with Belimo as a reliable partner.
